

# SLIDING-SHOE PUMP

Experience for yourself why the Positive Displacement Sliding Shoe Pump is the US Navy's first choice for many applications, particularly where simply, rugged construction, inherent self-priming and high suction lift can save time and money.

- > Self-compensating for wear
- > Single cover access to few working parts
- > Super suction; self priming & safely runs during dry suction
- > Handles clean, dirty and abrasive liquids; extremely viscous or free flowing
- > Low shear; low emulsification characteristics (ideal for oil water separators)
